1. INTRODUCTION

You are the owner of a **LIFT-O-SEM**. This machine has been designed to give you complete satisfaction.

This equipment is the result of research into new solutions with the aim of reducing costs.

In order to get the most out of your **LIFT-O-SEM**, please read your manual with care and follow the advice concerning maintenance and adjustment carefully.

Your dealer remains at your disposal for further information, so please don't hesitate to contact him.

In the interest of improvement, **AGRISEM INTERNATIONAL**[®] reserves the right to modify their products, but in so doing they are not under obligation to reproduce these modifications on existing models.

Likewise, characteristics in this manual can be modified without notice. Therefore, adjustment procedures and subsequent use of material, which are only guide-lines, can not be considered our responsibility.

2. GUARANTEE CONDITIONS

These guarantee conditions are only applicable to **machines exclusively equipped with original AGRISEM INTERNATIONAL parts**, « Beaucé », 44850 LIGNE, FRANCE; they are as follows:

- If a fault is noticed on any structural part of the machine in the **6 months** following delivery and if this fault is due to a raw material defect or due to fabrication procedures at the factory. The parts presumed faulty should be returned to the company for appraisal.

Proof of delivery:

- The date on the delivery note and the bill.
- The return of the guarantee card within 8 days of delivery (signed and stamped by the dealer and the owner).

The guarantee is limited to refunding or repair of the faulty parts, with material and servicing in our factory and by our technical service.

- Costs relating to dismantling and replacement of the faulty part are not covered by the guarantee nor are the transport costs for the machines or machine-parts (to the repair site and back).
- Regarding the guarantee, the term "Machine" is designated exclusively for new machines and parts manufactured by AGRISEM INTERNATIONAL. It does not include outer components such as tyres, flexible hydraulic hoses etc, even though these parts are also provided by the company.
- Naturally the guarantee does not apply to:
 - Faults due to wear and tear, misuse, lack of maintenance
 - Accident-damage or use not consistent with usual functions.
- The company can not be held responsible for damage incurred during transport and manipulation by the transport company concerned. It is the addressee who must deal with, as necessary, the transporters in such a situation.
- **The guarantee will be rendered null and void if any modifications are carried out on the machine without the formal agreement of AGRISEM INTERNATIONAL or if parts other than those produced by the company are used on the machine (eg. counterfeit parts).**
- AGRISEM INTERNATIONAL cannot be held responsible for complaints or injuries to the owner or a third person, nor the indirect consequences as a result of this; likewise no claims are possible in the case of the breakdown of an implement due to a defect or an incident with the machine.
- The company's responsibility concerning the guarantee is dependent on the strict respect, by the dealer and the owner, of the following regulations :

A) THE RETURN OF THE GUARANTEE CARD BY THE DEALER, DULY FILLED-IN AND SIGNED BY THE DEALER AND THE OWNER.

B) The claim must imperatively be formulated on the AGRISEM INTERNATIONAL guarantee reclamation form and sent by the dealer to the company's technical service, by recorded delivery, with acknowledgement of receipt, within a delay of one month following the incident. The reclamation form must be clearly filled in by the dealer and include the following information :

- Name and address of the dealer, client code,
- Name and address of the owner,
- Type of machine,
- Working width,
- Serial number of the machine,
- Delivery date to the owner,
- Date of the problem,
- Precise references of parts replaced, with invoice number and date,
- Make and type of tractor used,
- Detailed description of presumed causes of incident,
- Surface area worked by machine,
- Surface area of farm,
- Type of soil clay %,
 - Stoney yes no

C) The parts presumed faulty should be returned to the company for appraisal along with a duplicate of the guarantee reclamation form as proof. The transport costs necessary for return of the above-said parts are the responsibility of the sender.

D) Maintenance and use of the machine must conform to the user's manual.

E) The technical director or managing director of the company will make the final decision as regards the reclamation. This decision, regardless of the object of the guarantee appeal, is irreversible and the owner must agree to accept this decision regarding the defect, its replacement or that of certain parts.
The Company salesmen are not competent to make such a decision and if they do so, it should be considered null and void.

NOTA: In case of refusal, the part remains at the disposition of the client for 8 days, after this delay it will be disposed of with no appeal possible.

F) All safety measures mentioned in the user's manual and, likewise, those for all complementary material must be respected. All elements for protection and safety devices, plus all dangerous parts (e.g. shock absorbers) must be regularly inspected and replaced when necessary.

- Dealers have no right nor the permission to make any decision, whatsoever, on purpose or otherwise, in the name of the company.
- With the aim of constant improvement of its products, AGRISEM INTERNATIONAL reserves the right to modify them, with no obligation of reproducing the improvements on existing models.

Furthermore, due to the constant evolution of techniques, no guarantee can be given as regards the description of materials in all documentation produced by the company.

3. CORRECT USE OF THE MACHINE

The AGRISEM INTERNATIONAL LIFT-O-SEM seed-drills must only be used for the work it is destined for.

In the case of damage due to use of the machine for work outside the constructor's specifications, the constructor can not be held responsible.

The correct use of the machine also implies:

- The respect of regulations of use, maintenance and upkeep as stated by the constructor,
- Exclusive use of replacement parts, accessories and original equipment appointed by the constructor.

The LIFT-O-SEM seed-drill must only be used, maintained and repaired by people competent to do so, familiar with the characteristics and the way of using the machine. The above-said people should be aware of the possible risks to which they are exposed.

The user must strictly comply to all regulations regarding:

- Accident prevention.
- Safety at work (labour laws).
- Driving on the road (Highway Code).

He has the obligation to observe all warnings concerning the machine. All modifications made by the user or any other person without the written agreement of the constructor disengages all responsibility of the constructor should damage result.

4. SAFETY INSTRUCTIONS

Most accidents that happen while working, during maintenance or when displacing a machine are due to non-observance of elementary security regulations. Consequently, it is imperative that all people likely to work with this machine strictly respect the following fundamental rules. The same is true regarding the safety advice written on the stickers attached to the DS1500 / DST1500 SEED-DRILL.

1. Before all operations make sure that the DS1500 / DST1500 seed-drill is on a stable surface.
2. This DS1500 / DST1500 seed-drill was conceived for precise work, it must always be in perfect working order and only repaired with original AGRISEM INTERNATIONAL parts.
3. All necessary precautions must be taken when adapting working parts that are heavy or sharp.
4. Verify that the machine respects personal safety.
5. Verify tightness of screws and bolts before each use.
6. Verify that the DS1500 / DST1500 seed-drill is coupled correctly.
7. Ensure that the tractor has sufficient ballast at the front before all work, in order to avoid any risk of tipping up; if necessary add ballast to the front of the tractor.
8. Distance all people from the manoeuvring area of the DS1500 / DST1500 seed-drill.
9. Never transport anybody on the DS1500 / DST1500 seed-drill or its complementary tools during work or displacement.
10. Be aware of hidden obstacles (stones, roots, tubing, cables, etc) if an incident occurs, STOP IMMEDIATELY, and find the cause.

NB: If the obstacle is an electric cable or gas-line, alert the authorities competent to deal with it.
11. Never leave the tractor unless the DS1500 / DST1500 seed-drill is resting on the ground, brakes on, motor off and the key out of the ignition.
12. Never adjust or repair anything unless the tractor motor is stopped and the machine is resting on the ground.
13. Before driving on the road, the user must ensure that the machine is coupled correctly and visible, in respect of the Highway Code.
14. Verify the correct tyre-pressure on your tractor and your LIFT-O-SEM :

Reference:	Dimension:	Tyre pressure (bars)
Low pressure wheel : ROUE528	800 / 45 – 26,5/16	2,2

15. On rough ground or tight turns reduce your speed.
16. Before any displacement, even short distances, verify the balance of the tractor and complementary material. Never drive over 25 Km/h when loaded.

5. GENERAL SAFETY RULES

1. **Never let children** climb on the tractor or play close to material, even when the machine is stopped ;
2. On delivery of a machine (new or second-hand) insist on the provision of the **user's manual** and the **code of work certificate of conformity** and from there on respect the constructor's instructions ;
3. Make sure that the LIFT-O-SEM seed-drill and its complementary material does not hide the tractors rear lights ;
4. If necessary equip your material with **reflective signalization** panels or complementary luminous indicators ;
5. Clear the highway of any mud left by the tractor or tools ;
6. Be aware that soil-working material, however narrow, presents a real danger (cutting-edge blades, ploughshares, discs...) and can be fatal in an accident ;
7. Wear safety shoes and gloves when manipulating sharp parts ;
8. If the material is not already equipped, anticipate means of signalization: **illumination ramps, catadioptrics, plates or bands of reflective stickers**. Long or large material must imperatively have a signalling system when the tractor's rear lights are hidden ;
11. Always employ **bolts and locking systems** ;
12. For exposed metal parts, use an anti-rusting product or grease.

6. USING YOUR LIFT-O-SEM DST6000

6.1 DESCRIPTION

The LIFT-O-SEM is designed on a wheel-less frame principal. It is equipped with 2 complete systems of sowing (individual capacity: 3000L) and a rear hydraulic lift. A DISC-O-MULCH S35 folding version with a working width from 5 to 8m can be coupled to this rear hydraulic lift.

This high capacity seed-drill is independent of the rear mounted implement, and the quality of work doesn't depend on hoppers' filling up. The design has been done to have the best manoeuvrability as possible.

6.2 PREPARATION FOR USE

When you receive your LIFT-O-SEM, verify that its characteristics are as stipulated. Then, carry out the preliminary operations for starting up, as indicated in this manual.

6.3 COUPLING-UP THE LIFT-O-SEM TO THE TRACTOR

1. Reverse the tractor in order to couple-up with the LIFT-O-SEM (should be resting on a stable surface).
2. Place the tractor's ring-bolt under the pull eye bolt.
3. With the handle situated on the stand (**see: figure N°1**), Couple-up the tractor's ring-bolt to the LIFT-O-SEM's pull eye bolt.
4. Lock the tractor's ring-bolt.
5. Link the hydraulic flexible of the LIFT-O-SEM to the tractor.
6. To unfasten the LIFT-O-SEM, do the preceding operations in reverse order and ensure that the apparatus is on a stable surface.

Handle

Figure N°1

During coupling-up or unfastening, nobody should remain between the tractor wheels and the pull eye bolt.

6.4 COUPLING-UP THE DISC-O-MULCH TO THE LIFT-O-SEM

1. Reverse the LIFT-O-SEM in order to couple-up with the DISC-O-MULCH which should be resting on a stable surface.
Be sure that the hitch bar is situated on the lower 3rd point of the LIFT-O-SEM (**see: figure N°2**).
2. Line up the inferior arms of the lift with the DISC-O-MULCH's clevis.
3. Couple-up the lower lifting arms by means of the appropriate device on the highest clevis of the DISC-O-MULCH, and the hitch bar on the highest 3rd point.
4. Adjust the length of the 3rd point, which link the DISC-O-MULCH to the LIFT-O-SEM, so as to have a prestressed on the 1st gang of discs.
5. Link the hydraulic flexible of the DISC-O-MULCH to the LIFT-O-SEM.
6. To unfasten the DISC-O-MULCH, do the preceding operations in reverse order and ensure that the apparatus is on a stable surface.

3rd Point (the lower)
LIFT-O-SEM

Figure N°2

During coupling-up or unfastening, nobody should remain between the LIFT-O-SEM wheels and the DISC-O-MULCH.

6.5 ADJUSTMENTS

6.5.1 Working width of an element

- The DISC-O-MULCH coupled-up to the LIFT-O-SEM is delivered with a pre-adjusted distance between each disc.

6.5.2 Depth adjustment

- Put the elements in their working position (deflector...).
- Adjust the depth by manipulating the shafts of the multistop caps when your tool is equipped with a roller (see: **figure N°3**).

Deflector
Multi Stop

Figure N°3

6.5.3 Land wheel

On the right side of the LIFT-O-SEM, the land wheel is directly coupled with the rear hydraulic lift. To disunite both functioning, a ¼ valve is fixed on the jack.

- In working position: open the ¼ valve to allow the simultaneous work of the land wheel and the rear hydraulic lift of the LIFT-O-SEM (see: **figure N°4**).
- In transportation position: when the DISC-O-MULCH is up, close the ¼ valve to let the land wheel up (see: **figure N°5**).

Figure N°4

¼ valve

Figure N°5

A flow controller, integrated on the hydraulic circuit of the land wheel, ensure a soft up-device.

Each season before using your LIFT-O-SEM, it is advisable to check the different tensions of the chains that go from the land-wheel to the distribution system. Adjustment devises are integrated into the machine for this purpose.

6.6 **BALE CHUTE**

6.6.1 Technical characteristics (see: figure N°6).

Figure N°6

Type:	CS 150
Flow:	8 à 15m ³ /h
Length:	5000mm
Diameter:	Ø150mm
Motor type :	OMP50
Cylinder:	50cm ³
Hydraulic flow :	15 à 40l/min (max)
Max pressure :	80bars
Material :	INOX

6.6.2 Preparation for use of the bale chute

Working of the bale chute and the turbine can be driven far away from the tractor thanks to a single scalloping oil distributor situated on the LIFT-O-SEM's (see: figure N°7).

The notched position of both command lever of the distributor has to agree with the right working rotation of the bale chute.

The speed rotation of the bale chute is governed by two flow regulator pre-adjusted (see: figure N°8). This speed has to be lower than 1000tr/min.

Figure N°7

Flow limiter
Bale chute drive
Turbine drive
Pressure inlet
Pressure outlet
Back

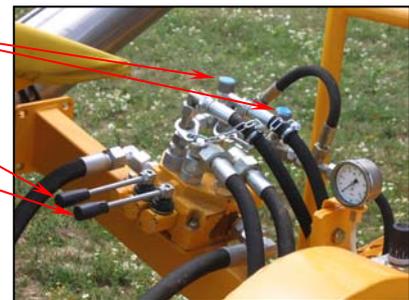

Figure N°8

For the oil distributor linkage refer to the following kit: **SEM05-20-007** exposed in this manual.

6.7 MAINTENANCE AND REPAIR

Before beginning any maintenance operation or oiling, make sure that the safety instructions have been followed. Before adjustments or verification, make sure the LIFT-O-SEM and the DISC-O-SEM are horizontal and stable. Block the machine if necessary.

1. Every each 30 hours, oil wheel axle's ball bearings, roller cage's bearings...
2. Before each using, oil all rams articulations and all shafts which have grease fitting.
3. Oil all chains.
4. For machines equipped with pneumatic brake: before each start, drain off the water condensation accrued inside the air tank in actuating the drain valve.
5. For machines equipped with hydraulic brake: before each using, verify the smoothness of each brake ram, and also the parking brake one.
To stretch again brake cables, use systems situated at each end of pipes (screw + nut).
6. The discs must be replaced as soon as their diameter reaches the following values:

Disc diameter	Maximum diameter of wear and tear
 Ø510	Ø 460
 Ø560	
 Ø610	

AGRISEM INTERNATIONAL
 can not be held responsible if the DISC-O-MULCH is used with discs that have a level of wear and tear superior to that specified.

⇒ To replace the discs:

- a. Lift the DISC-O-MULCH about 15 cm off the ground and block it in that position with the tractor motor stopped and the parking brake on.
- b. Take off the damaged disc.
- c. Put on a new one.

 The tightening torque for the disc mounting is 110Nm.

	<p>Only use original AGRISEM INTERNATIONAL parts</p> <p><i>All the parts are made from specially treated steel, thus it is not advisable to solder them or else the thermal treatment loses its efficiency.</i></p>
---	--

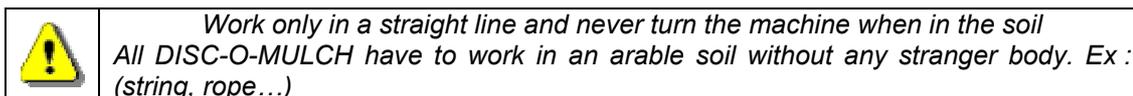

6.8 ADVICE FOR OPTIMAL USE

Before all usage, make sure that all safety instructions are followed and that the machine has been greased and maintained correctly.

1. When the soil humidity is great, slipping could degrade the superficial soil structure. It is better to use a tractor with four-wheel drive to reduce sliding.

2. Adapt your working speed to the type of soil and chosen working depth.

3. Verify the following list before use the LIFT-O-SEM + DISC-O-MULCH's assembly :
 - Does the LIFT-O-SEM correctly couple-up to the tractor?
 - Do the brake systems correctly link to the tractor?
 - Does the lift locking shafts are in place?
 - Does the road sign bar correctly fixed and easily visible following the standards?
 - Are the working parts in good condition and fixed correctly?
4. Respect the following working depths: Stubble-breaking from 3 to 4 cm.
5. During use verify that the LIFT-O-SEM is correctly coupled and perfectly horizontal when working, in the longitudinal and transversal sense.
6. The correct use of the LIT-O-SEM optimizes and ensures a good establishment of your crop. AGRISEM INTERNATIONAL can not be held responsible for soil degradation or a result which is not up to your expectations. The user must make his own decisions and assume the risks taken should his machine be used incorrectly or inappropriately.

7. PNEUMATIC SEED-DRILL DST 6000

7.1 TECHNICAL CHARACTERISTICS

Working width:	5m à 8m
Empty weight:	4436Kg
Hopper volume:	2x1500L
Extension volume:	6x500L
Distribution:	Stainless steel
Small seed capacity:	0 – 30,3cm ³
Large seed capacity:	0 – 595,7cm ³
Speed ratio:	r = 12/17 ou r = 17/12
Turbine :	Hydraulic

7.2 TURBINE START-UP OPERATION

7.2.1. Hydraulic connections

The tractor oil flow have to be at 60L/min in minimum. Under this value the turbine speed rotation could be insufficient, especially for large seed sowing.

Maximal using pressure : 200 bars

1. Connect the 2 large-hose couplings to one of the tractor's distributors (*see: figure N°9*).
2. Verify what type of coupler is present on the tractor's hydraulic reservoir return line (screw-on coupler, valve-mechanism coupler ...) (*see: figure N°10*).
3. Using an adaptor, connect the valve-mechanism coupler of the turbine motor's drain (*small hose*) to the tractor's hydraulic reservoir's return line valve (*see: figure N°11*).

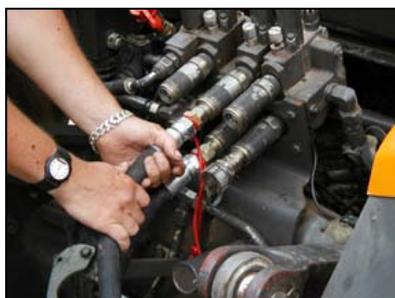

Figure N°9

Figure N°10

Figure N°11

4. Connect the valve-mechanism coupler of the turbine motor's drain (*small hose*) to the adaptor on the tractor's hydraulic reservoir's return line (*cf. : figure N°12*).

the turbine motor's drain MUST be connected before any start-up operation.

Figure N°12

7.2.2. Adjustment of the pump type

- If your tractor is equipped with a variable delivery hydraulic pump, turn off the red tap situated on the turbine control block. In order to do this, turn the tap clockwise. The central indicator must be completely depressed (**see: figure N°13**).
- If your tractor is equipped with a fixed delivery hydraulic pump, turn on the red tap situated on the turbine control block. In order to do this, turn the tap anti-clockwise. The central indicator must be out completely (**see: figure N°14**).

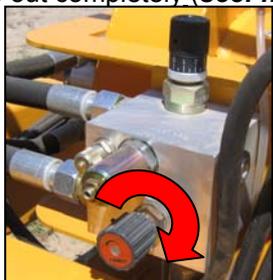

Figure N°13 : Variable delivery hydraulic pump

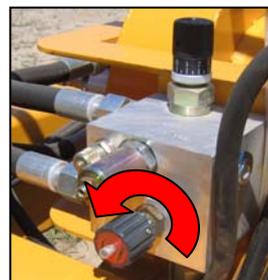

Figure N°14 : Fixed delivery hydraulic pump

7.2.3 Start-up operation for the turbine motor

Actuate the tractor distributor in its permanently open position. The turbine should work.

If not, inverse the motor's two supply hoses at the level of the tractor distributor (**see: figure No 15**).

Once again actuate the tractor distributor in its permanently open position. The turbine should, now, work.

Figure N°15

7.2.4 Adjustment of the turbine motor speed

Actuate the graduated delivery limiter situated on the turbine control block in order to vary the speed of rotation of the turbine and to adjust the internal pressure of distribution's pipes (**see: figure N°16**).

The manometer fixed close to the turbine, allows the visualisation of this pressure.

<i>Working width</i>	5m	6m
Small seeds:	40mbar	50mbar
Large seeds:	60mbar	70mbar

Figure N°16

☞ The turbine rotational speed depends on the type of seed you want to sow and on the working width. For example **see: sheet upper**.

Don't turn the delivery limiter when the moto ris running.

7.3 HOPPERS

Hoppers are made in high density polyamide. This allows the using of one hopper with fertilizer and one with seeds.

Hoppers are easily accessible by a gangway situated on the left side of the LIFT-O-SEM. During the filling of the bale chute you can come and go on a gangway situated on the front of hoppers.

Both hoppers are closed with a rolled up cover (**see: figure N°17**).

Figure N°17 : Gangways

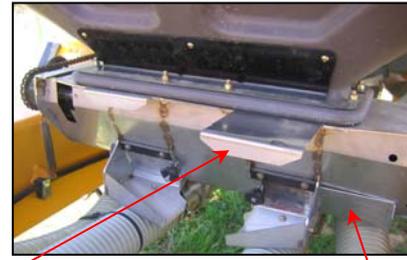

7.3.1. Filling hoppers

Before filling hoppers, make sure that the 2 emptying traps (see: **figure N°18**), on the distribution implement, are closed correctly.

In order to facilitate further adjustment of delivery, it is advisable to also close the 2 traps that block the distribution supply tube (see: **figure N°18**).

Likewise ensure that the filter, found inside the hopper, is perfectly free, in order to facilitate the flow of grain.

The outer port-holes allow you to see the evolution in the level of grain and, thus, estimate the quantity remaining.

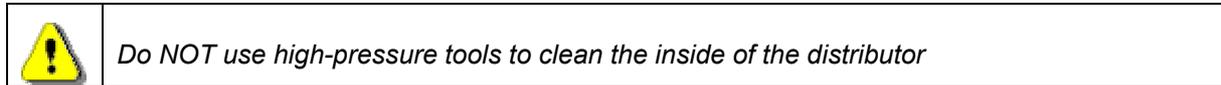

Hopper closing trap Emptying trap
Figure N°18 : Distribution

7.3.2. Emptying hoppers

To empty the hopper, place a recipient under the 2 emptying spouts. Progressively open the 2 emptying traps, one after the other, in order to increase the rate of flow.

Once the hopper is empty, withdraw any grains left in the distributor, with the help of a paint brush or a similar tool, then close the traps.

Do NOT use high-pressure tools to clean the inside of the distributor

☞ After each use, systematically empty and clean the hopper and the fluted feed drills, then stock the machine in a sheltered place.

7.4 DISTRIBUTIONS

7.4.1 Description

Each hopper has a volumetric distribution system, consisting of 2 identical distribution canals (see: **figure N°19**). The dose modulation is carried out by the lateral movement of the fluted feed drills, actioned by a crank. This section of fluted feed drills consists of, asymmetrically:

- 2 large fluted (largegrains),
- 2 small fluted (small grains),
- 2 dosing cylinders.

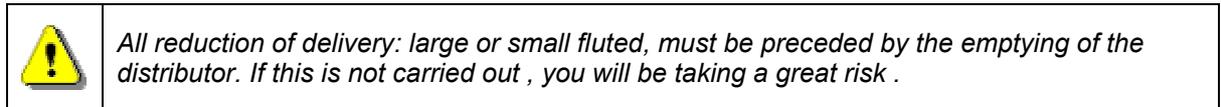

Figure N°19 : Volumetric distribution

The rotation of the crank combined with an indicator, allows the user, with the graduated scale (mm), to visualize the length of the fluted feed drill being used.

The graduated scale has two zones:

- positive : large fluted delivery (of between 0 and 96mm)
- negative : small fluted delivery (of between 0 and -16mm)
- ☞ The value 0 corresponds to the position at which there is no delivery (neutral).

All reduction of delivery: large or small fluted, must be preceded by the emptying of the distributor. If this is not carried out, you will be taking a great risk.

A removable box situated on the side of the distributor provides a 2 speed ratio (**see: figure N°20 and N°21**).

Figure N°20 : Large delivery ratio

Figure N°21 : Small delivery ratio

To change from one speed ratio to another, just pull out the 2 beta lynch pins, slide the box towards the outside, then reposition it, being careful as regards the 2 axles.

✎. For security reasons, the 2 fluted lynch pins which allow the positioning of the box as regards the 2 axles, are of a size that will resist normal torque transmission .If the effort required is too large, one of the lynch pins will shear.

7.4.2 Adjustment of grain delivery

Depending on the type of grain used, the width to be worked, and the density of seeding desired (Kg/ha), please consult the following dosage table. This will allow you to decide the speed ratio necessary and where on the scale (mm) you should position yourself.

Dosage table (kg/Ha) for working width of 5m and 6m

	Semence Semilla Seme Seed Saatgut	Blé Trigo Grano Corn Getreide	Seigle Centeno Segala Rye Roggen	Orge Cebada Orzo Barlez Gerste	Avoine Avena Avena Oats Hafer	Pois - Soja Arveja - Soja Piselli - Soja Peas - Soya Erbsen - Soja	Graminée Graminea Forragio Grass Futteranbau

In order to find the desired delivery rate, it is advisable to do several trials before moving-off.

The following table allows you, depending on the width worked, to know the number of rotations of the land-wheel necessary in order to cover the area of 1 hectare.

Working width	5m	6m
No. of crank rotations / ha	848,8	707

7.4.3 Grain delivery rate control

- ☞ Before every use makes sure that the inside of the different fluted feed drills is completely clean. If they are not, the delivery rate trials will give incorrect results.
- ☞ Likewise make sure that the inside of the distributor is completely free of grain before any movement of the section of fluted feed drills.

After having carried out all the necessary adjustments:

- 1- Place the box on the chosen speed ratio
- 2- Adjust delivery depending on the desired density;
- 3- Place a recipient for the calibration ,pre-weighed, under the filling traps of each of the 2 distribution canals (**see Figure N°22**),
- 4- Open the 2 filling traps of each of the 2 distribution canals, by tipping them backwards ,
- 5- Define the percentage of surface to be simulated
- 6- Rotate the wheel the number of times that correspond
- 7- Weigh the grain in the recipient
- 8- Calculate the weight necessary for a hectare
- 9- Compare the result obtained with that of the table.

Figure N°22 : Filling traps

There are two possibilities:

- ☞ The weight obtained corresponds to that expected
 - close the 2 filling traps of each of the 2 distribution canals .The trial is over.
- ☞ The weight obtained is different to that expected:
 - known: weight desiredMS
 - Weight measured:.....MM
 - Position of indicator at start (mm):.....PCD

it is possible to improve the position of the indicator by using the following calculation:
 Desired indicator position (mm) : $PCS = (MS \times PCD)/MM$

2 possibilities

- ☞ PCS >> PCD :
 - Move the indicator to its new position,
 - Renew steps 6 to 9 .

☞ PCS << PCD:

The difference $P C D - PCS \leq 5mm$

- Move the indicator to its new position,
- Renew steps 6 – 9.

otherwise:

- Empty the distributor, by closing the 2 traps that block the tube which supplies the distributor (see paragraph: §1.2.2.).
- Move the indicator to its new position,
- Renew steps 6 to 9.

7.5 DISTRIBUTION HEAD

Each distribution head supplies 16 seeding-tubes spread-out over the seeding ramp of the LIFT-O-SEM.

Depending on the width worked, 4 return-tubes are present in order to recuperate the grain destined for the outlets which are not being used.

In addition, a conical plug screw allows, by simple unscrewing, access to the inside of the distribution head (*see: Figure N°23*).

Figure N°23 : Tête de répartition

Each season before using your LIFT-O-SEM, it is advisable to clean and “blow” through each distribution head outlet.

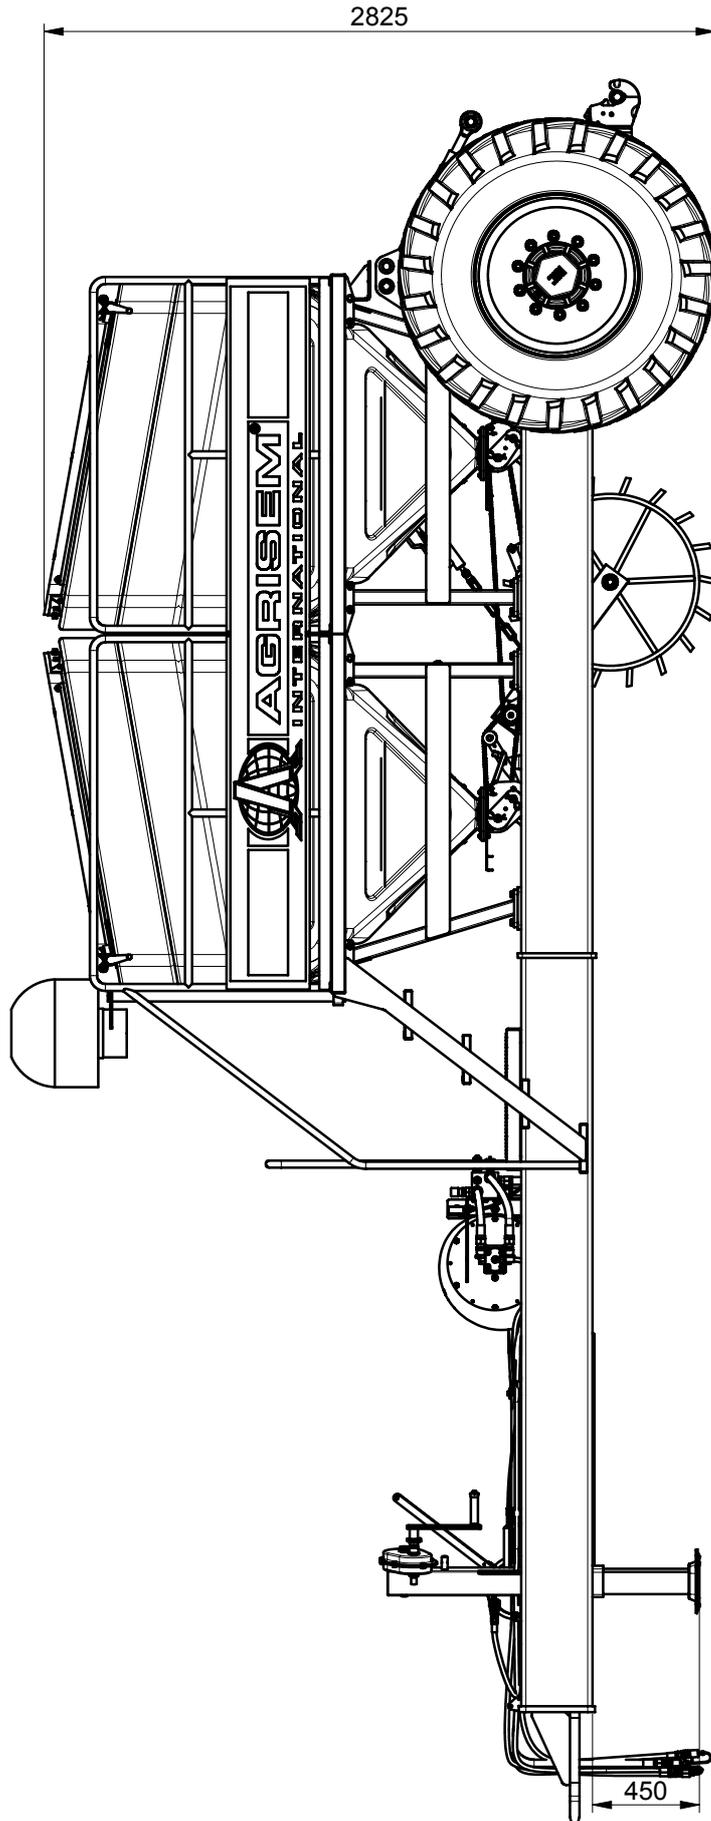

7.6 VERIFICATION BEFORE SOWING

- 1- Make sure that the rotation of the land-wheel generates grain delivery from each outlet on the DISC-O-SEM seeding ramp.
- 2- Verify that all the pneumatic hoses are correctly fixed, upstream and downstream of the distribution.
- 3- Verify the correct connection of the turbine's hydraulic hoses to the tractor distributor.
- 4- Verify the pressure (mbar) at the turbine's outlet.
